## **Love Conquers All** Saxon Andrew

The Alliance of Worlds has decided that humans are to be annihilated as an example to anyone that discovers ancient alien technology, even though there is no proof against them. They think fifty thousand warships can do the job. Unfortunately, the humans are not cooperating with their plan, and one young human who has fallen in love will change everything.

A young boy born with unique psychic abilities.

An ancient alien artifact he accidentally discovers.

Now Earth is targeted for total annihilation by 50,000 warships.

In this epic story, Saxon Andrew takes us into the future and the lives of human and nonhuman characters, some we can easily relate to, and others who are a bit different. Along with a hearty dose of battles and spaceships, this is a story that offers humor and a tale of enduring love against the backdrop of galactic war on a grand scale.

## From Reader Review Love Conquers All for online ebook

### **Jilly says**

Space Opera at it's best

### **puchu says**

Please stop destroying universes...its kind of ridiculous.

#### **Doc Smith would like it**

This is unabashed space opera. The heroes are noble and the villains are nasty. Maybe not as nasty as Chlorians or Eddorians, but gee, who is? I found myself smiling as I read it. Our Hero could give Kimball Kinnison a run for his money.

### **Oneeyed says**

Badly written. The author uses constant monologues by various characters for exposition, and it feels very clunky and downright annoying after a while.

The characterisation and plot are overly simplistic even for a YA title. The protagonist is overpowered, creating no tension or real sense of challenge.

The technology is... magic, not only the main character's powers but the various weapons used.

Overall I felt that this book wasn't even at the level of pulp SF (which can be entertaining when in the mood).

My rating: 1.

This is a very good sci fi tale that starts off a little slow, but picks up steam fast and not a minute of action stops from about the 45% mark to the end. This is one of those sci fi tales I had a hard time putting down, and I enjoyed it. The author does a good job with the technology and dialogue, although he lost me a few times with some of the alien race names. I found myself dreaming about some of the technology and wishing I had it right here, right now.

As I type this review, the book is just 99 cents in the Kindle store - grab it now before the price goes up, as it is a dollar well spent!

You're left with a good conclusion, but obviously wanting to know what further develops in the storyline so I just purchased the second book in the series

This is not a book for an adult but if you know a teen who likes sci-fi, they may enjoy it.

### **LMW says**

One star ratings are for books I just could not finish. Being the Authors first book, I could tolerate some of the writing idiosyncrasies, but the poor science killed it. Never mind the psychic powers, the "Coronado Solar Panel" just killed it. A floor mat sized solar panel able to produce more power than a square mile of conventional panels, and store excess efficiently too!

The solar output reaching the earth's surface is just over a kilowatt per square meter, under optimum conditions (sea level, and the equator, high noon during an equinox). Where conventional solar panels are only 20% efficient, even increasing that efficiency to 100% would not provide the power described.

Science fiction does need some speculation, loosely based on our understanding of physics, or even beyond that, but some things are just too much.

The technology in this book is handled in a very simplistic fashion. Would have to say the same with regard to storyline/plot. Was too contrived and storybook for me.

That said, I oddly enjoyed it. Not enough to read any sequels that may exist, but not disappointed to have read this book.

Plot summary: a boy growing up learns that he has "special powers". He has mastered the art of not being seen. Simultaneously, Earth is being targeted for destruction by a couple of alien races. The two plot threads join up and proceed from there.

### **Stuart says**

Not one for adults of mean intelligence. But my 11 year old loved it and is now well onto the third book. So, probably leave it to teens and tweens.

### **Ellis B. Stewart says**

### **Entertaining**

Interesting ideas, good pacing. I like the humans being the underdogs, just not quite helpless as usual. An entertaining read.

### **Jeremy Michael Gallen says**

#### **Good a Science Fiction Novel**

In this science fiction novel, a boy named Thomas Anglo Gardner, nicknamed Tag, has a series of intergalactic adventures. Mentioned early in the book is an alien species that resembles a cross between four-armed Kangaroos and gorillas, although as the following text mentions a few different alien species, it can be easy to forget which race is which. Even so, there are some amusing popular culture references that round out this recommended read.

### **Clinton Robert Oberholster says**

#### **Brilliant fun!**

Tons of tech, oodles of psychic mayhem and masses of space warfare.  
The characters are loveable, the bad guys deplorable, and the story magnificent.  
Only a few minor foibles throughout the entire book but none of them detract from a well written and action packed Space Opera that is deserving of the name.  
Now to get the next book....

### **Marjean P says**

I love this book!! Science fiction books made me start reading in junior high. This book has action, aliens, and a love story too. I'm rooting for Tag , Danielle, all of their friends, Earth , and even Atlas. I'm going to buy the next book and find out what happens when the aliens come back.

### **Joey Woolfardis says**

Impossible to finish this book. It is written in such a way that tangents lead in to clichés that lead in to complicated expositions that give nothing to the overall experience.
