### **Bi-yahh says**

A must-have for every nursing student. It got me through my 4 years with hard work and a diligent attitude. The book itself is very useful. Heavy enough for weights and a good sleeping pill at night. Haha

### **Sandra says**

A wonderful nursing reference, with many online perks (videos, powerpoints, etc.) at the publisher's website. Added benefit: given the size of the textbook, it can be used in one's daily strength training regimen!

---

### **Nicol says**

Does answer most questions on depth. Great step by step skills tables. Definitely use as a reference, personally I could not read whole chapters through without falling asleep but that is the nature of textbooks like these. Much better than my fundamentals book Potter and Perry.

Wow! This series, I have the two volume set, is the best I have ever read! (Even better than the book I used in college) This was used for my RN Refresher course recently. I was greatly impressed with the details, the study aids, drug information, etc. The amount of work it must have taken to put together such a comprehensive textbook astounds me. Yes, it is humungous, but well worth the cost and the time necessary to read it all the way through!

### **Nicole says**

Excellent details, but very wordy. In my opinion, they use about 3 X the words they need to explain something. The study guide is a must--covers everything and some pretty challenging questions to prep you for exams.

---

### **Deborah says**

this is the very comprehensive text book from which have to study for this week and otherwise. (To do well) Interesting case studies, and lots information, the weight of the book alone states the knowledge therein! Ok back to teh books (never thought I would rate a text)

### **Theresa Ann Casper Nelson says**

I hope I never have to look at this textbook again.

### **Eric Polk says**

Having been in both Associate degree and Baccalaureate nursing programs, I can say that this is the better of the two Med-Surg textbooks I have used. While this one is beast compared to the the other one (Medical-Surgical Nursing by Lewis, et al.), I found the extra bulk was offset by the relevance of the content.

Brunner's provide the A&P of the conditions and provides excellent info about the nursing interventions associated with each condition, often broken down into ADPIE sections. When I was writing my care plans and concept maps in Baccalaureate program I found myself using the Brunner's textbook and mainly used to the Lewis book to hold open the pages of other books. If your program doesn't use Brunner's, get a copy because it will save your careplans.

### **Melissa says**

looks like another book I'm going to sleep on...if a textbook is so long they have to divide it into two volumes, do they really think anyone is going to read it?
