The Magic School Bus Flies With The Dinosaurs Martin Schwabacher , Carolyn Bracken (Illustrator) , Joanna Cole , Bruce Degen

Classic Magic School Bus facts and humor are now available for early readers!

Ms. Frizzle's class is drawing dinosaurs. But Dorothy Ann's picture is of her pet parrot. Ralphie tells her a parrot is a bird, not a dinosaur. Who's right?

When Ms. Frizzle and her class hop on the Magic School Bus to try to find the answer to this question, they are transported back in time to the age of the dinosaurs. Climb on board the Magic School Bus and learn all kinds of facts about dinosaurs!

Evan says

This is filled with evolution including that dinosaurs came from birds. Ugh.

Kcodd92 says

The magic school bus flies with dinosaurs by Martin Schwabacher is about this crazy teacher who takes her class on the magic school bus back to when dinosaurs existed. The students were wondering if birds were dinosaurs and the teacher Ms. Fizzle says lets look for clues. So they get on the magic school bus and travel back in time. They get back to the time where dinosaurs are alive and the students are looking around at the dinosaurs. They are trying to figure out if the dinosaurs they see are also a form of bird. They see a dinosaur that can eat meat and climb up a tree. They see a dinosaur that looks like a bird does today. A volcano goes off and just in time the magic school bus comes and picks them up. They fly over China today and see people looking at the dinosaur fossils. They get back to their classroom and they realized that birds are dinosaurs.

I would say this book is for the primary age range. The book has fairly easy words and not a lot of pages. However the children may need help with saying the names of the dinosaurs.

The pictures are glossy and very colorful. The pictures are made up of lots of lines.

I would recommend this book because it teaches children about something they probably do not know about; dinosaurs. While there are not actual dinosaurs still here there are forms of them such as birds.

Rosa Cline says

This is a good book due to it being a Magic School Bus book... they are always fun, and always written where you can read only the 'main' story or the little cartoon balloon thoughts that the kids are saying and even the little paragraphs at the bottom of the pages telling additional information about the subject.

This one is about dinosaurs, I was a little disappointed as I don't think the writer didn't do as well of a job that they could have done with the subject.

And you don't have to read these in any type of order BUT if you pay attention to Ms Frizzle's dress at the end of each book it will tell you what book is 'next'.

Megan Garrison says

Copyright- 2005

Number of Pages-32

Book format-paperback

Reading Level-1-2 GR Level- N/A

Genre- Fiction

Lit. Requirement- Science Fiction-1

Magic School Bus is the iconic book and TV show that follows Ms. Frizzle and her class to different time periods to learn about science. This particular one the class is learning about dinosaurs and they wonder if a parrot is a type of dinosaur. They travel to China when dinosaurs were alive and observe many birds. It discusses different types of birds and how they evolved. They observe carnivores and herbivores and different types of dinosaurs as well. They find out in the end that a parrot is from a prehistoric bird but has changed since the time period. They observe the fossils and are able to see the resemblance between dinosaurs and birds. There are facts on every page and lots of new large vocabulary words for readers. This would be a good book for a lesson on dinosaurs and it can be expanded on. Although it is true facts, there is a short excerpt in the back about the true events it is still fiction. It is fiction because and class is going to visit where the dinosaurs lived. I love this book and I think it is told in a way children will love and be interested in.

Kayla says

The Magic School Bus books and movies have always been one of my favorites. I think they have always been relevant. This book is an easy read for young kids to read a fun story and learn about dinosaurs and prehistoric times also. It also gives some ideas for learning. Talking about it and then letting the kids draw dinosaurs. Also, one thing that the teacher did in the story is something we should do as teachers. One of the students asked a question about dinosaurs and instead of the teacher immediately rattling off the answer, she said well let's figure it out. It's great to let the kids wonder and explore. This book gives a great amount of information along with a story and I think children will love learning from the Magic School Bus!

Rachel says

Both my 1st grader and kindergartener love this series, especially the books about animals. There is not too much text, and there are some fun long words to learn. They like noticing what new message is on the bus every page, and reading all the exclamations the kids make. Great books.

Genevieve says

Flies with the dinosaurs was about dinosaurs and birds. I liked this book because I got to learn about dinosaurs. My favorite character was D.A. and Miss Frizzel because they knew most of the stuff. I would recommend this book to everybody because I want them to learn about dinosaurs.

Patricia says

...birds came from dinosaurs? One species evolved into another species? That is, a reptile evolved into a non-reptile bird??? Sorry, but I don't believe that. It makes for a good laugh, though. Dinosaurs are one species and birds are another species. Perhaps it is more of a... two different species shared similar characteristics...

Amara Tanith says

Let me preface this by saying that I am *not* a paleontologist. I could not be further from being a paleontologist. I am not *excruciatingly* uninformed about dinosaurs and other prehistoric animals--and would even dare say that I know ever so slightly more than the average person--but bear in mind that it is entirely plausible that this book could contain outdated theories, misconceptions, or other forms of misinformation or mistakes that I, being reasonably ignorant on the subject of dinosaurs, would not be able to spot. That said, here's my best shot at a review for this.

The Magic School Bus Flies with the Dinosaurs, being a Level 2 Scholastic Reader, features "vocabulary and sentence length for beginning readers" and is intended for very young children. According to the acknowledgements in the book, Carl Mehline and Sean Mortha of the American Museum of Natural History in NYC supplied "their expert advice in preparing this manuscript". So it is reasonable to assume that this book was scientifically accurate when it was published in 2005.

However, as I'm sure anyone can imagine, the progression of science didn't exactly halt in 2005, and I'd hazard a guess that by now, *something* mentioned in this book has likely been affected by research newer than the book itself. If you're terribly concerned about teaching your child only the most up-to-date dinosaur-related information, you would likely be better served by looking into books published more recently.

Anyway, the specific subject of *The Magic School Bus Flies with the Dinosaurs* is dinosaurs in relation to birds. When Ms. Frizzle's class does reports on various dinosaurs, Dorothy Ann chooses to bring in her pet parrot; this sets the class on a time-traveling, prehistorical adventure to examine the link between a parrot and a dinosaur.

Dinosaurs and prehistoric birds mentioned or featured in the book are Stegosaurus, Tyrannosaurus, Jinzhousaurus, Triceratops, Pterosaur, Mei, and Caudipteryx, Sinornithosaurus, Microraptor, Jeholornis, and Confuciusornis.

I'd tentatively recommend this book to parents reading to their children and/or children interested in dinosaurs or paleontology, as long as one bears in mind the potential for outdated information.

Elizabeth S says

An awesome introduction to the various time periods of the dinosaurs. The book also helps connect the living dinos of the past with the dead archaeological digs of today.

Dolly says

This is another fun book in the Magic School Bus Chapter books and Readers series of books. I like that these stories are short and have fewer notes and dialogue than the original stories. Plus, our youngest can help me read them, which is great since she loves them so much. The stories help teach science concepts and this one discusses dinosaurs, especially the fossils of those found in China.

We've read a couple of other Magic School Bus books that featured dinosaurs: The Magic School Bus In the Time of the Dinosaurs (a picture book) and Dinosaur Detectives (a chapter book.) Both of those books were fairly similar in plot and I was afraid that this would be yet another rehashing of the same story. But it was refreshingly different and offered a glimpse into the evolution of birds as well as several dinosaurs we'd never heard of before, like the Sinornithosaurus.

Magdalene says

My son it was just okay.
