“Whenever mankind is in trouble, a hero always emerges.” The groinks are slowly taking over planet after planet, and their next target is Earth. The Interplanetary Council is tied up in disputes. All that stands between the human race and annihilation is Oops the Mighty Gurgle. Aided by his two human assistants, Chuck and Kia (and Floppy the dog), Oops must travel across time, space and black holes and face innumerable dangers to save Earth from the ferocious green pig-like creatures who are grunting their way towards it. And along the way, they must deal with amorous emperor penguins, the Cerebums of Holibutt, whose brains are in their bottoms, and the mysterious creatures from the Dark Planets. A laugh-out-loud funny romp through the universe as you never knew it.

Anusha Sankar says

This is clearly a book for the younger readers. And I mean very young readers, as is indicated on the back cover. I certainly appreciated the novelty of the ideas the author came up with - live worms eating out wormholes(as opposed to them being a mathematical concept), peabrainers,etc. I cracked up when I was reading the concept of poods.

the story itself though is written in a very childish manner. The author spoonfeeds every bit of information to the reader. The situations that our protagonists find themselves in are interesting, but they are too easily solved. The narrations leading to the problems are long-winded,however, the solutions hardly have a page or two each if that. I was frustrated and left with the feeling of wanting more.

I don't regret reading this book, but, younger readers will certainly enjoy this book more than I did. The ideas are original, and if coupled with proper execution will definitely be a hit.
