Everything Weather: Facts, Photos, and Fun that Will Blow You Away Kathy Furgang , National Geographic Kids (Editor)

Weather can be wild, freaky, and fascinating! Powerful twisters roar through homes; earthquakes shatter whole cities; hurricanes fly through towns. How does it all happen and how do we know what we do? All you need to know about weather and all of its wildness will be found in the pages of this colorful, energetic, and accessible book. Kids will also learn about real-life encounters with wild weather from National Geographic tornado chaser, Tim Samaras, featured in "Explorer's Corners" throughout the book. Packed with fun facts and amazing photographs, this book gives kids an in-depth look at these amazing natural phenomena.

Carol says

Great pictures!

Doren Damico says

This book has stunning photographs accompanied by colorful boxes with captions and descriptions for all kinds of weather. It explains what weather is and isn't, describes extreme weather and provides safety tips, discusses weather predicting, and tells about the adventures of explorer Tim Samaras. Along with various weather scales and diagrams, it includes a brief history of weather-watching, weather comparisons that illustrate weather events, and has a great section on fun weather activities.

Stacy Kirkman says

This would be a great resource for a science lesson about weather. It would be able to answer hundreds of questions about what people who studied weather in the past and present as well as phenomena regarding seasons and change. There are tons of vivid pictures that describe the text and the book is just really engaging.

Alondra Villa says

This book is all about weather. It gives facts about thunderstorms, tornados, ect. This is a non-fiction book it give a lot of facts about the different types of weather that we have all around the world. I rated this book five stars because it gave a lot of good, interesting information and the pictures were very fun to look at. This book is for younger kids like first or second grade because it is a fairly simple book. This book could also be for higher grades too if one needs facts on weather.

Steve Holden says

This book is a lot of fun for students interested in weather. The photography is fantastic, and there are a number of topics explained and presented very nicely. This can suit a range of learners and grades too, not just as a simple introduction. Of the National Geographic Weather books I have and use, this one is my favorite - and the favorite of my class.

Alex Weaver says

This book is full of images and interesting facts surrounding weather. I think this is best suited for intermediate grades because it does have a lot of text. This book has a lot of pictures, diagrams, as well as captions to engage higher thinking.

Twin-text:

The Flash: Wrath of the Weather Wizard (c)2011 by Mike Decarlo and Erik Doescher.

I chose this book because it would really engage students (especially boys). They would be able to see how the different elements of weather are used by the Weather Wizard throughout the story.

L13_Allison Safran says

This book, produced by National Geographic, is a great pick for kids interested in weather! The book has amazing photography, fun facts, and a detailed description of a variety of weather phenomenon. I was impressed by the book because it gave enough detail for students to have a basic understanding, but it did not overwhelm young readers with too much information. Instead, it provided "Wow Facts" throughout the book to give more specific information.

I purchased this book just last week and I love it. It is a great tool for an "Extreme Weather" unit, or to provide some information about our crazy Chicago weather all year long! The photographs are stunning and very clear. The text is a good teaching tool for informational text because it has captions, headings, maps, photographs, table of contents, index, etc. It is engaging enough for kids to power through the complex navigation system that is informational text. Overall, students in grades 3 to 6 would enjoy this text!
