# On the Quest for Computable Knowledge

*Stephen Wolfram*

## On the Quest for Computable Knowledge Stephen Wolfram

Wolfram discusses the history of computation from its earliest beginnings to current applications and the emergence of computable knowledge. Notable figures include: Pythagoras, Archimedes, Isaac Newton, Galileo, Gottfried Leibniz, Carl Linnaeus, John von Neumann, and many others.

## **From Reader Review On the Quest for Computable Knowledge for online ebook**

**Roberto Rigolin F Lopes says**

Wolfram has this thrilling vision that we are at a tiny corner in the vast computational universe. All modern science, therefore, has been evolving to support civilization; he goes through a timeline to show that just recently we developed the tools to explore (math + computers + software + data = computable knowledge). Now we can set ourselves free from the usual human endeavours and start mining interesting computations in the unknown. Perhaps even behaving like freaking explorers.
